Directions for Questions 11-15:

Read the passage and answer the questions that follow on the basis of the information provided in the passage.

Microprocessor is an electronic computer Central Processing Unit (CPU) made from miniaturized transistors and other circuit elements on a single semiconductor Integrated Circuit (IC). Before the advent of microprocessors, electronic CPUs were made from individual small-scale Integrated Circuits containing the equivalent of only a few transistors.

By integrating the processor onto one or a very few large-scale Integrated Circuit packages (containing the equivalent of thousands or millions of discrete transistors) , the cost of processor power was greatly reduced.

The evolution of microprocessors has been known to follow Moore's Law when it comes to steadily increasing performance over the years. This law suggests that the complexity of an Integrated Circuit with respect to minimum component cost will double in about 18 months. From humble beginnings as the drivers for calculators, the continued increase in power has led to the dominance of microprocessors over every other form of computer; every system

from the largest mainframes to the smallest handheld computers now uses a microprocessor at their core. .As with many advances in technology, the microprocessor was an idea whose time had come. Three projects arguably delivered a complete microprocessor at about the same time: Intel's 4004, Texas Instruments' TMS1000, and Garrett AiResearch's Central Air Data

Computer. . A computer-on- a-chip is a variation of a microprocessor, which combines the microprocessor core (CPU), some memory, and I/O (input/output) lines, all on one chip. The proper meaning of microcomputer is a computer using a (number of) microprocessor(s) as its CPU(s), while the concept of the patent is somewhat more similar to a micro controller.

11) Which of the following descriptions would NOT fit a microprocessor? A) Electronic computer
B) Central Processing Unit
C) Memory disk

D) A single integrated chip circuit. Ans... c

12) Select the TRUE statement from the following.

A) 1 microprocessors and computers on a chip are variations of each other.
B) Integration of processing power on chips has made processing power cheaper. C) Before microprocessors, CPUs were not made from individual small scale ICs. D) A microprocessor circuit only has transistors in it. Ans... c

13) Which of the following was NOT the first to develop a microprocessor?

A) Microsoft
B) Intel
C) Texas Instruments
D) Garret Ans... a

14) According to the passage, which of these is NOT a use of microprocessors? A) Drivers for calculators
